# Obstacle Course

Create an obstacle course in your learning environment (inside or outside in a safe space). Narrate children's movements and positions in space as they move through the course.

## For example:

- ◆ Boxes for children to move in between
- ◆ Ramps for children to climb over
- ◆ Tunnels for children to crawl in or under

**More Support:** As children move around the room or through a simpler course, label and narrate where they are in space.

## Prompt Children to Identify Positions in Space

“Wow, look at our friend sliding their body under the chair to get to the next part of our course.”

“I see a long log coming up next. Will this friend decide to climb over the long log or go around it?”
