

Sorting Shapes

Provide children with an assortment of shapes and encourage them to sort the objects based on their properties.

Possible ways to sort:

- ◆ By number of sides.
- ◆ Groups of 2D shapes and 3D shapes.
- ◆ By number of angles.

Prompt Children to Identify Shapes and/or Their Properties

“I see you sorted the squares and rectangles into the same group. Why did you sort them this way? You’re right! Squares and rectangles both have 4 sides.”
